

A HYBRID ROUTER

1 ABSTRACT OF THE DISCLOSURE

2 A hybrid router is disclosed that is capable of operating as a fixed or a
3 plunge router wherein the preferred embodiment thereof comprises a motor assembly that
4 has a housing containing a motor as well as operating handles attached to the housing and
5 operating controls for operating the motor. The motor assembly can be removably
6 installed in either a fixed base assembly or a plunge base assembly. The preferred
7 embodiment has an adjustment knob that is located on the motor assembly that engages
8 depth adjustment mechanisms of either the fixed and plunge base assemblies when the
9 motor assembly is installed in the respective base assemblies.
